Variable terrain from riverside to Ponderosa forest yields a wide variety of wildflowers including the common but fascinating *Equisetums* which are fern allies and pre-date the angiosperm / flowering plants. In a two hour hike over gentle trails, we'll identify a minimum of thirty blooming herbaceous and shrubby specimens in an enjoyable outing for both novice and avid botanists. The park, which ranges from 6,600 to 7,200 ft elevation, hosts hummingbirds and many other birds, and deer are spotted frequently.
